DETAILED ACTION

Information Disclosure Statement

The information disclosure statement (IDS) filed 4/29/2005 is being considered by the examiner.

The information disclosure statement filed 4/29/2005 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each cited foreign patent document; each non-patent literature publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed.

Further, the International Search Report has not been considered by the Examiner, because it is an opinion and not a publication.

Specification

The substitute specification filed 4/29/2005 has been entered.

The incorporation of essential material in the specification by reference to an unpublished U.S. application, foreign application or patent, or to a publication is improper. Applicant is required to amend the disclosure to include the material incorporated by reference, if the material is relied upon to overcome any objection, rejection, or other requirement imposed by the Office. The amendment must be accompanied by a statement executed by the applicant, or a practitioner representing the applicant, stating that the material being inserted is the material previously incorporated by reference and that the amendment contains no new matter. 37 CFR 1.57(f).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 4 and 6-21 are rejected under 35 U.S.C. 102(b) as being anticipated by US patent 5123677, Kreczko et al.

In regards to claims 1, 2, 4 and 6-21, Kreczko et al a connection element (B, D) as part of a rapid connection unit for connection lines, comprising a tubular base body on which at least two two-armed snap elements are formed that are diametrically opposite one another, laterally spaced and connected at a rocking point by an elastic connection piece to an outer wall of the base body and comprise inwardly directed hooks that can reach behind capable of engaging a catch element on an outer wall of a counter piece of the rapid connection unit characterized in that wherein the snap elements comprise are designed as spring arms whose free ends are bent back and inward in such a manner that a gap is present between these free ends and an opposite contact surface in an engaged position, the opposite contact surface limiting rocking movement of the snap elements such that inwardly directing hooks disengage the catch elements by of the arms.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
